

Database for EEG/ERP experiments

JEŽEK, P., MOUŽEK, R. *Database for EEG/ERP experiments*. Plzeň, Park Hotel, 2009.

The goal of this work was to summarize problems with the storage of EEG/ERP records. We have design metadata description of raw data. We have developer own software solution which includes wide web application with users accounts where users can store data from own experiments. Data can be described by own metadata which can be selected from prepared forms. We have tested possibilities of semantic web solution including owl structures as well.
